Mk,

This is a very expensive device which may be nice but only for those physicians who have difficulty seeing or understanding the venous system. Virtually no one in the USA is using it.

Now for the bad news, Diane and I have gotten a divorce. She turned out to be doing some very bad things to me financially and of course, we are now in a legal battle. Such is my life for now, but I am happier than I have ever been now that she is gone.

Hope to see you soon one day. Would welcome the opportunity to be invited to lecture in my favorite country - down under.

Mitch

Hi Mitch,

I hope you and Dianne are well.

I have just had a look at the vein view device on the internet.

It looks interesting.
